**Ali Haidar : Global Claims in Construction** before purchasing it in order to gauge whether or not it would be worth my time, and all praised Global Claims in Construction:

In recent years, a number of global claims have failed because they were presented without any systematic analysis,

justification or proper calculation of losses. Hence, *Global Claims in Construction* highlights these issues as well as the importance of understanding causation, factual necessity and the courts attitude and approach to global claims. *Global Claims in Construction* addresses the principles of global claims and their calculation methodologies in detail through extensive references to literature, case law and a real world case study. It aims to be a valuable resource for professionals working in the construction industry, as well as students in construction and engineering.
