**Charles Lawson, Jay Sanderson : The Intellectual Property and Food Project: From Rewarding Innovation and Creation to Feeding the World** before purchasing it in order to gage whether or not it would be worth my time, and all praised The Intellectual Property and Food Project: From Rewarding Innovation and Creation to Feeding the

World:

The relationship between intellectual property and food affects the production and availability of food by regulating dealings in products, processes, innovations, information and data. With increasingly intricate relations between international and domestic law, as well as practices and conventions, intellectual property and food interact in many different ways. This volume is a timely consideration and assessment of some of the more contentious and complex issues found in this relationship, such as genetic technology, public research and food security, socio-economic factors and the root cause of poverty and patent-busting. The contributions are from leading scholars in this emerging field and each chapter foregrounds some of the key developments in the area, exploring historical, doctrinal and theoretical issues in the field while at the same time developing new ideas and perspectives around intellectual property and food. The collection will be a useful resource in leading further discussion and debate about intellectual property law and food.

'This book is an excellent resource for those mapping the increasingly complex links between intellectual property rights (IPRs) and food security. It both highlights the potential of IPRs to enhance agricultural production, and analyses some of the challenges raised by IPRs that are key for the future of global agriculture.' Elise Perset, General Counsel, CGIAR Consortium

About the Author Charles Lawson is a recognized expert in the international scholarship on intellectual property, and in particular the issues of access and benefit sharing under international law. Jay Sanderson is a recognized scholar on intellectual property and plants. Since taking up his current position his scholarship also considers the complex and contingent relations within intellectual property and food.
