Rudolf Frauendorfer, Roland Liemberger : The Issues and Challenges of Reducing Non-Revenue Water (ESA BR) before purchasing it in order to gauge whether or not it would be worth my time, and all praised The Issues and Challenges of Reducing Non-Revenue Water (ESA BR):

Improving the efficiency of water utilities and reducing water losses are becoming top priorities in Asia, with its often-limited water resources and rapidly increasing urban population. This publication provides an up-to-date introduction to the subject matter, highlights the complexity of managing non-revenue water (NRW), offers guidance on NRW assessment, and recommends appropriate performance indicators. It is, to a large extent, based on the work of the

Water Loss Specialist Group of the International Water Association in the last decade, and is amply complemented by the authors' practical experiences in Asia and in other countries around the world.
